

FAQS

HOW MUCH DOES IT COST FOR AN INFRARED INSPECTION?

Each predictive inspection is unique and can be custom-tailored to your facility's needs and budget. An average inspection is a fraction of the cost of rebuilding or replacing your main electrical service. Call for an estimate.

THIS IS A BRAND NEW FACILITY. DOES IT NEED TO BE INSPECTED?

Yes, better safe than sorry. You may have the opportunity to have any repairs made while the building and equipment are still under warranty.

WE OWN AN INFRARED CAMERA. CAN WE DO THE INSPECTIONS OURSELVES?

We recommend taking advantage of the peace of mind that comes with our full service Predictive Maintenance Program (PdM). We also offer software and training for the up-and-coming thermographer.

WHO WE ARE

AND WHAT WE DO

Trendformers Infrared is a Predictive Maintenance (PdM) company specializing in infrared inspections of manufacturing facilities and commercial buildings of all sizes.

Our certified thermographers expertly use non-invasive infrared imagers and customer friendly software to locate, identify and report any temperature anomalies in electrical systems and mechanical equipment.

Effectively monitoring temperature trends in electrical and mechanical equipment is necessary in order to anticipate problems before they occur. It provides the ability to plan maintenance schedules and take corrective action to make repairs *before* incurring costly breakdowns or suffering system failures and possible catastrophic safety hazards. Every "hot spot" robs your facility of critical power and decreases your bottom line by wasting electrical energy.

If left unattended, "hot spots" can lead to shutdown and can sometimes cause data loss.

- We offer a variety of standard and customized predictive maintenance services to suit your facility's needs.
- We re-inspect abnormalities after repairs are completed to verify the problem is eliminated.
- We can also monitor items on a continual basis until the critical temperature is reached or until the repair can be scheduled.

Infrared thermography is the most efficient and cost effective way to maintain your facility. Most importantly, your employees and their families will be grateful you are creating a safe workplace by minimizing electrical hazards.

Contact us today for more information or to schedule an appointment.

SERVICES & SUPPORT

Build a customized, full-service Predictive Maintenance Program:

ELECTRICAL

Inspections compliant with NFPA 70E and ASTM standards

PROCESS EQUIPMENT

Increase reliability through detailed comparative analysis

ON-SITE TRAINING COURSES

Designed and presented by ASNT Level III, Terry Clausung, PE

CONSULTING ENGINEERING

Thermal, spectral, moisture analysis and research projects
